Inspired by the National Research Council's report Being Fluent with Information Technology this text takes an adaptive style of learning where readers immediately begin to apply the text's content into everyday activities and interface with technology with newfound confidence and understanding. Unlike computer literacy, which teaches only immediately useful skills, Fluency with Information Technology adds problem solving, reasoning and complexity management to prepare students to use computers today and to be effective technology users tomorrow.

Technology has evolved into society's primary tool for organization, communication, research, and problem solving. It is essential that everyone learn the fundamental skills that can be applied towards being an effective user of today's technology as well as a lifelong learner of future technology. Fluency with Information Technology: Skills, Concepts, and Capabilities provides the framework for developing confident users who can both adapt to changes and solve problems as technology evolves.

Computers, communications, digital information, software â €™the constituents of the information age â €™are everywhere. Being computer literate, that is technically competent in two or three of today â €™s software applications, is not enough anymore. Individuals who want to realize the potential value of information technology (IT) in their everyday lives need to be computer fluent â €™able to use IT effectively today and to adapt to changes tomorrow. Being Fluent with Information Technology sets the standard for what everyone should know about IT in order to use it effectively now and in the future. It explores three kinds of knowledge â €™intellectual capabilities, foundational concepts, and skills â €™that are essential for fluency with IT. The book presents detailed descriptions and examples of current skills and timeless concepts and capabilities, which will be useful to individuals who use IT and to the instructors who teach them.

This book is suitable for undergraduate students in computer science and engineering, for students in other disciplines who have good programming skills, and for professionals. Computer animation and graphics are now prevalent in everyday life from the computer screen, to the movie screen, to the smart phone screen. The growing excitement about WebGL applications and their ability to integrate HTML5, inspired the authors to exclusively use WebGL in the Seventh Edition of Interactive Computer Graphics with WebGL. This is the only introduction to computer graphics text for undergraduates that fully integrates WebGL and emphasizes application-based programming. The top-down, programming-oriented approach allows for coverage of engaging 3D material early in the course so students immediately begin to create their own 3D graphics. Teaching and Learning Experience This program will provide a better teaching and learning experience for you and your students. Teaching Information Fluency describes the skills and dispositions of information fluency adept searchers. Readers will receive in-depth information on what it takes to locate, evaluate, and ethically use digital information. The book realistically examines the abilities of Internet searchers today in terms of their efficiency and effectiveness in finding online information, evaluating it and using it ethically. Since the majority of people develop these skills on their own, rather than being taught, the strategies they invent may suffice for simple searches, but for more complex tasks, such as those required by academic and professional work, the average person ' s performance is adequate only about 50% of the time. The book is laid out in five parts: an introduction to the problem and how search engine improvements are not sufficient to be of real help, speculative searching, investigative searching, ethical use and applications of information fluency. The intent of the book is to provide readers ways to improve their performance as consumers of digital information and to help teachers devise useful ways to integrate information fluency instruction into their teaching, since deliberate instruction is needed to develop fluency. Since it is unlikely that dedicated class time will be available for such instruction, the approach taken embeds information fluency activities into classroom instruction in language arts, history and science. Numerous model lessons and resources are woven into the fabric of the text, including think-alouds, individual and group search challenges, discussions, assessments and curation, all targeted to Common Core State Standards as well as information fluency competencies.

Information and communications technology (ICT) pervades virtually all domains of modern life-educational, professional, social, and personal. Yet although there have been numerous calls for linkages that enable ICT competencies acquired in one domain to benefit another, this goal has largely remained unrealized. In particular, while technology skills and applications at work could be greatly enhanced by earlier complementary learning at school-particularly in K-12 education, a formative and influential stage in a person's life-little progress has been made on such linkages. At present, the curricula of most U.S. high schools focus on skills in the use of tools such as specific word-processing software or contemporary Internet search engines. Although these kinds of skills are certainly valuable-at least for a while-they comprise just one component, and the most rudimentary component, of ICT competencies. The National Academies held a workshop in October 2005 to address the specifics of ICT learning during the high school years would require an explicit effort to build on that report. The workshop was designed to extend the work begun in the report Being Fluent with Information Technology, which identified key components of ICT fluency and discussed their implications for undergraduate education. ICT Fluency and High Schools summarizes the workshop, which had three primary objectives: (1) to examine the need for updates to the ICT-fluency framework presented in the 1999 study; (2) to identify and analyze the most promising current efforts to provide in high schools many of the ICT competencies required not only in the workplace but also in people's day-to-day functioning as citizens; and (3) to consider what information or research is needed to inform efforts to help high school students develop ICT fluency.

This book, by combining sociocultural, material, cognitive and embodied perspectives on human knowing, offers a new and powerful conceptualisation of epistemic fluency – a capacity that underpins knowledgeable professional action and innovation. Using results from empirical studies of professional education programs, the book sheds light on practical ways in which the development of epistemic fluency can be recognised and supported - in higher education and in the transition to work. The book provides a broader and deeper conception of epistemic fluency than previously available in the literature. Epistemic fluency involves a set of capabilities that allow people to recognize and participate in different ways of knowing. Such people are adept at combining different kinds of specialised and context-dependent knowledge and at reconfiguring their work environment to see problems and solutions anew. In practical terms, the book addresses the following kinds of questions. What does it take to be a productive member of a multidisciplinary team working on a complex problem? What enables a person to integrate different types and fields of knowledge, indeed different ways of knowing, in order to make some well-founded decisions and take actions in the world? What personal knowledge resources are entailed in analysing a problem and describing an innovative solution, such that the innovation can be shared in an organization or professional community? How do people get better at these things; and how can teachers in higher education help students develop these valued capacities? The answers to these questions are central to a thorough understanding of what it means to become an effective knowledge worker and resourceful professional.
