Rodman (government, Colby College) examines the use of sanctions from the early Cold War era through the 1990s, including the Helms-Burton Law and the Iran-Libya Sanctions Act. He argues that sanctions are weak and costly measures that damage diplomatic relations, particularly when used to prevent key multinational corporations from undertaking economically significant transactions with proscribed nations. This book traces the role of money in the creation of the state. From US independence to the establishment of the EU and the breakup of the USSR and beyond, Wilson examines changing attitudes about monetary sovereignty, arguing for a more rational attitude toward money as a means of transactions rather than as a symbol of national identity.

From the British Empire to the WTO, imperialism and its political economy have turned the world upside down. This volume of original essays by internationally noted scholars traces the spread of imperialism and capitalism and demonstrates that globalization is not a New Millennium phenomenon, but rather one with classic roots as well as contemporary reverberations.

The past 30 years are often depicted as an era of globalisation, and even more so with the recent rise of global giants such as Google and Amazon. This updated and revised edition of The Handbook of Globalisation offers novel insights into the rapid changes our world is facing, and how best we can handle them.

Globalization is by no means a new phenomenon; transcontinental trade and the movement of people date back at least 2,000 years, to the era of the ancient Silk Road trade route. The global spread of infectious disease has followed a parallel course. Indeed, the emergence and spread of infectious disease are, in a sense, the epitome of globalization. Although some experts mark the fall of the Berlin Wall as the beginning of this new era of globalization, others argue that it is not so new. The future of globalization is still in the making. Despite the successful attempts of the developed world during the course of the last century to control many infectious diseases and even to eradicate some deadly afflictions, 13 million people worldwide still die from such diseases every year. On April 16 and 17, 2002, the Forum on Emerging Infections held a working group discussion on the influence of globalization on the emergence and control of infectious diseases. The contents of the unattributed sections are based on the presentations and discussions that took place during the workshop. The Impact of Globalization on Infectious Disease Emergence and Control report summarizes the presentations and discussions related to the increasing cross-border and cross-continental movements of people and how this could exacerbate the emergence and global spread of infectious diseases. This report also summarizes the means by which sovereign states and nations must adopt a global public health mind-set and develop a new organizational framework to maximize the opportunities and overcome the challenges created by globalization and build the necessary capacity to respond effectively to emerging infectious disease threats.

Putting Tradition on Trial challenges the commonly-held beliefs that the Son of God was resurrected on either the first day of the week or the Sabbath day by comparing three popular Bible versions with literal translations of the relevant ancient Greek texts, thus enabling the reader to clearly discern where and how the Scriptures have been altered to accommodate these doctrinally inspired interpretations. It is supported by both astronomical calculations and historical evidence and identifies Jewish customs that no longer appear in the popular versions, which are a valuable aid in determining the correct context of key passages.

"With narrative fluency and deftness, constructed on a bedrock of prodigious archival research, HoSang's book provides a sorely needed genealogy of the 'color-blind consensus' that has come to define race and recode racism within US politics, law and public policy. This will be a book that lasts."--Nikhil Pal Singh, author of Black is a Country: Race and the Unfinished Struggle for Democracy "An important analysis of both the exact contours of white supremacy and the failures of electoral anti-racism."--George Lipsitz, author of The Possessive Investment in Whiteness "Racial Propositions brilliantly documents the history of race in California's post-World War II ballot initiatives to show that nothing is what it seems when it comes to race and politics in America's ethnoracial frontier. Daniel HoSang provides readers with a sharply focused interdisciplinary lens though which to see how the language and politics of political liberalism veil what are ultimately racialized ballot initiatives. If California is a harbinger for the rest of the country, then HoSang's tour de force is required reading for anyone interested how the United States will negotiate diversity in the 21st century."--Tomás R. Jiménez, author of Replenished Ethnicity: Mexican Americans, Immigration, and Identity
