Professional reference for industrial-occupational professionals. Used as a reference for currently practicing occupational/industrial hygienist professionals or those seeking certification/registration as CIH or ROH.

The industrial hygienist is actively involved with the engineering community, particularly where the subject of industrial ventilation is concerned. While engineers concentrate on methods and techniques necessary to ensure maximum efficiency of a given system, the industrial hygienist concentrates on human health. Ventilation is one of the most widely used methods of controlling environmental eontaminates, and for this reason. industrial hygienists must have specific knowledge of the design of equipment and the principles which it operates. This informative Page 17/25

text, written in easily understood language, will allow those without a mechanical engineering background to understand air calculation and ventilation problems. Industrial Hygiene Ventilation provides the industrial hygienist with a handy reference containing the equations, constants, conversions, and formulae that they will encounter in their day to day duties.

The science of occupational hygiene is growing, as is awareness amongst Australian employers of the importance of minimising occupational health and safety risk. Occupational Hygiene and Risk Management offers an innovative approach to learning about the practice and principles of occupational hygiene and managing risk in the workplace. This new edition of this widely used textbook has been extensively updated with new material on legislation and Australian and New Zealand standards. It also includes expanded sections on risk analysis and management. The theory Page 23/25

of occupational hygiene is brought to life through case studies, illustrations and practical examples. Occupational hygiene aims to minimise ill-health from exposure to hazardous events by a process of identification, evaluation and control. These three stages form the foundation of this textbook as physical, psychological and emotional health risks are examined across the following topics: * Hazard identification * Dusts and particulate * Metals * Chemical contaminants * Noise and vibration * Heat and cold * Radiation and pressure * Biological

Page 24/25

hazards * Ergonomics * Risk analysis * Control * Risk management Occupational Hygiene and Risk Management is accompanied by a website with discussion questions, case studies, further readings and teacher resources, creating an invaluable resource for students and professionals. Visit
