JCI_Standards 6th_Ed_Hospital.pdf - Joint Commission ...

Joint Commission International Accreditation Standards for Hospitals, 6th Edition, provides the basis for accreditation of hospitals throughout the world. Joint Commission International (JCI) standards define the performance expectations, structures, and functions that must be in place for a hospital to be accredited by JCI.

Joint Commission International Accreditation Standards for Hospitals, 5th Edition, provides the basis for accreditation of hospitals throughout the world, supplying organizations with the information they need to pursue or maintain patient safety, performance improvement, and accredited status starting 1 April 2014.

As the culminating volume in the DCP3 series, volume 9 will provide an overview of DCP3 findings and methods, a summary of messages and substantive lessons to be taken from DCP3, and a further discussion of cross-cutting and synthesizing topics across the first eight volumes. The introductory chapters (1-3) in this volume take as their starting point the elements of the Essential Packages presented in the overview chapters of each volume. First, the chapter on intersectoral policy priorities for health includes fiscal and intersectoral policies and assembles a subset of the population policies and applies strict criteria for a low-income setting in order to propose a "highest-priority" essential package. Second, the chapter on packages of care and delivery platforms for universal health coverage (UHC) includes health sector interventions, primarily clinical and public health services, and uses the same approach to propose a highest priority package of interventions and policies that meet similar criteria, provides cost estimates, and describes a pathway to UHC.

The Joint Commission on Accreditation of Healthcare Organizations is very pleased to present this second edition of Joint Commission International Accreditation Standards for Hospitals. This second edition contains the complete set of standards, statements of intent for each standard, and measurable elements for assessing compliance with each standard. This will permit readers to identify and understand the specific requirements embodied in the standards. New in the second edition is a clear emphasis on patient safety and on the importance of analyzing unexpected adverse events as a major way to reduce future risk. Also new to this edition is specific emphasis on pain management and on end-of-life care, both of which are addressed in the "Care of Patients" chapter.

The cultural groups discussed in this guide include African American, Anglo-American, Asian, Hispanic/Latino, Jewish, Middle Eastern, Native American, Russian, South Asian, and Southeast Asian. The book also discusses cultural patterns, including values, worldview and communication, time orientation, pain, family/gender issues, pregnancy and birth, children, end of life, and health beliefs and practices. The sections on health beliefs and practices are especially informative. This is a very handy pocket resource that broadly describes selected cultural groups. It includes a mnemonic (the 4 C's of Culture) to help healthcare professionals remember the questions to ask each patient: CALL (what do you call the problem?), CAUSE (what do you think caused the problem?), COPE (how do you cope with the problem?), and CONCERNS (what are your concerns?). This book should be required for all health professionals and students.

This book gathers high-quality research papers presented at the 2nd AUE international research conference, AUEIRC 2018, which was organized by the American University in the Emirates, Dubai, and held on November 13th-15th, 2018. The book is broadly divided into two main sections: Sustainability and Smart Business, and Sustainability and Creative Industries. The broad range of topics covered under these sections includes: risk assessment in agriculture, corporate social responsibility and the role of intermediaries, the impact of privatizing health insurance, political events and their effect on foreign currency exchange, the effect of sustainable HR practices on financial performance, sustainability integration in the supply chain and logistics, gender inequality in the MENA economies, the panel data model, the model of sustainable marketing in the era of Industry 4.0, micro-enterprises as a tool for combating unemployment, the impact of financial education and control on financial behavior, measuring financial and asset performance in agricultural firms, a comprehensive strategic approach to sustainability in the UAE, sustainability and project finance, HR analytics, FaD or fashion for organizational sustainability, a conceptual framework of sustainable competitive advantages, psychology of organizational sustainability, Blockchain technology and sustainability, veganism and sustainability, institution building from an emotional intelligence perspective, sustainable concrete production using CWP, occupants' behavior and energy usage in Emirati houses, the effect of shop lighting on consumer behavior, multimedia applications in digital transformation art, integrating biomimicry principles in sustainable architecture, experimental sustainable practices in fashion education, technology-assisted student-centered learning for civil engineering, and a 10-step design process for architectural design studios. All contributions present high-quality original research work, findings and lessons learned in practical development.

This book is a comprehensive guide to the monitoring of different organ systems in anaesthetics and intensive care. Divided into nine sections, the text begins with an introduction to the evolution of monitoring equipment, computerised reporting, and minimum standards. The following sections cover monitoring techniques for different systems of the

body – cardiovascular, respiratory, central and peripheral nervous, musculoskeletal, metabolic, and coagulation. The final chapters discuss the monitoring of pain and related topics such as ventilator waveforms, foetal monitoring, and future technologies. The book also features discussion on research-based monitoring ideas for the future, including quantifying pain, sedation, and maternal-foetal safety management. Key points Comprehensive guide to the monitoring of organ systems in anaesthetics and intensive care In depth coverage of many different systems of the body Includes discussion on pain monitoring and future technologies Highly illustrated with clinical photographs and diagrams

"This book answers 'why not' and 'how to' for health care accreditation bodies, quality experts, and frontline professionals, moving the reader from timely information, to inspiration, and through patient-centered action with practical tools and potent case studies." —Paul vanOstenberg, DDS, MS, vice president, Accreditation and Standards, Joint Commission International "This superb guide from Planetree illustrates that providing high-quality, high-value, patient-centered health care is not a theoretical ideal. The case studies make clear that these goals are attainable; they are being achieved by leading health care organizations worldwide, and there is a clear road map for getting there—right here in this book." —Susan Dentzer, senior policy adviser to the Robert Wood Johnson Foundation "At IHI, we follow the principle, 'all teach, all learn'—the idea that everyone, everywhere has something to teach, and something to learn. This remarkable and indispensable guide is as pure an example of this principle as I've come across." —Maureen Bisognano, president and chief executive officer, Institute for Healthcare Improvement "The International Society for Quality in Health Care's mission is to inspire, promote, and support continuous improvement in the quality and safety of health care worldwide. It is in this spirit that we welcome this new book on patient-centered care. As in their previous work, the authors demonstrate just how critical it is to develop an organizational culture that puts patients first." —Peter Carter, chief executive officer, International Society for Quality in Health Care

With more than 8,000 nonmedical words, phrases, and acronyms related to the healthcare industry, Snee's Health Care Terms covers finance and reimbursement, managed care, government regulation, health professionals, legal issues, and more. Now in its fifth edition, Snee's is a reference for anyone who deals with the healthcare industry.

Print+CourseSmart

Already established as a classic comprehensive reference for the whole team at the IVF clinic, this new edition has been extensively revised, with the addition of several important new contributions on laboratory (including advanced sperm selection techniques for ICSI, human embryo biopsy procedures, oocyte activation, managing an oocyte bank, artificial gametes, and epigenetics) as well as on clinical topics (including GnRH agonist triggering, segmentation of IVF treatment, uterus transplantation, and risk and safety management). As previously, methods, protocols, and techniques of choice are presented by eminent contributors internationally.
