improvements in flexibility for instructors and strengthened learning solutions for students. Author C. Donald Ahrens has been widely praised for his ability to explain relatively complicated ideas so that even under-prepared students can understand them. The text's clear and inviting narrative is supplemented by numerous pedagogical features that help augment students' understanding. Introductory stories found at the beginning of each chapter draw students naturally into the discussion. In-chapter reviews help students master concepts while they study, and four types of end-of-chapter exercises provide opportunities for everything from further review to in-class discussion questions. In addition to these in-text learning aids, the eighth edition sees a complete integration with MeteorologyNow?, the first assessment-

driven and student-centered online learning solution created specifically for this course. MeteorologyNow? uses a series of chapter-specific diagnostic tests to build a personalized learning plan for each student, allowing students to focus their study time on specific areas of weaknesses. Each personalized learning plan directs students to specific chapter sections and concept-driven multimedia tutorials designed to augment their understanding. The new edition is available in its original nineteen chapter "classic" version, or as a "core" version, which features only the most popular sixteen chapters. The "core" version sacrifices none of the detail that the course needs, but eliminates chapters that may not be directly covered in class. Looking for more flexibility? With the Thomson TextChoice custom solution program, instructors

can select and reorganize chapters to perfectly match their syllabus, thereby creating the ideal text solution for the course.

This workbook/study guide is organized by chapter and includes chapter summary, important concepts, self-test true/false, multiple choice, and essay type questions and answers. A list of additional suggested reading material is also included to further enhance student understanding of the subject.

EXTREME WEATHER & CLIMATE is a unique textbook

solution for the fast-growing market of non-majors science courses focused on extreme weather. With strong foundational coverage of the science of meteorology, **EXTREME WEATHER & CLIMATE** introduces the causes and impacts of extreme weather events and conditions. Students learn the science of meteorology in context of important and often familiar weather events such as Hurricane Katrina and they'll explore how forecast changes in climate may influence frequency and/or intensity of future extreme weather events. An exciting array of photos and illustrations brings the intensity of weather and its sometimes devastating impact to every chapter. Written by a respected and unique author team, this book blends coverage found in Don Ahrens market-leading texts with insights and technology
