Although East Lothian is mainly seen as a rural county, it was home to many important and successful industries, which were of massive social and economic importance to the area. For example, salt pans provided salt for chemical and glass works, as well as the means to preserve fish and other foodstuffs. Limekilns were an important element in both industry and farming, taking limestone and burning it down to lime which was then used on the fields as a fertiliser.

In the 1920s there were over a million coalminers working in over 3000 collieries across Great Britain, and the industry was one of the most important and powerful in British history. It dominated the lives of generations of individuals, their families and communities, and its legacy is still with us today many of us have a coalmining ancestor. Yet family historians often have problems in researching their mining forebears. Locating the relevant records, finding the sites of the pits, and understanding the work involved and its historical background can be perplexing. That is why Brian Elliott's concise, authoritative and practical handbook will be so useful, for it guides researchers through these obstacles and opens up the broad range of sources they can go to in order to

His overview of the coalmining history and the case studies and research tips he provides will make his book rewarding reading for anyone looking for a general introduction to this major aspect of Britain's industrial heritage. His directory of regional and national sources and his commentary on them will make this guide an essential tool for family historians searching for an ancestor who worked in coalmining underground, on the pit top or just lived in a mining community.
