William Irvine & Finlay Maclennan 2006, Surveying for construction. McGraw-Hill Education 2.2 Additional Readings (Additional references for students to learn to expand their knowledge about the subject.) 1. Bannister A. & Raymond S. 1984, Surveying, 5th Edition, Pitman 2.

Surveying for Construction 5e is an essential textbook for students of engineering new to surveying, and will also appeal to students of building and environmental studies and archaeology. Offering a strong grounding in land and construction surveying, the authors clearly and comprehensively guide the reader through the principles, methods and equipment used in modern-day surveying. Taking into account recent advances in the field, the material has been fully updated and revised throughout including new and up-to-date coverage of levelling, total stations, detail surveys, and EDM. A new chapter on GPS technology has been added. In keeping with the practical nature of the book, there are chapters on setting out construction works and surveying existing buildings, which guide the reader step-by-step through the fundamental procedures. The clear and methodical nature of the explanations, supported by a wide range of exercises and examples, make Surveying for Construction 5e an invaluable and modern introduction to surveying. Key features include:

- Fully updated coverage and new material throughout, including a new chapter on GPS
- New Learning Objectives and Chapter Summaries which guide the student through the learning process and highlight the key principles and methods for each chapter
- Numerous diagrams and figures which give students a clear and detailed understanding of equipment and procedures
- Extensive boxed examples and exercises that guide students through real-world surveying methods and calculations
- Website material: online material for creating your own surveying project allows students to practice the methods and techniques they have learnt

This edition has been revised to take account of recent developments in surveying instrumentation and computing techniques. A new chapter on radial positioning and use of

mapping systems has been added and obsolete surveying methods have been removed from the book.

Engineer Geologic Mapping is a guide to the principles, concepts, methods, and practices involved in geological mapping, as well as the applications of geology in engineering. The book covers related topics such as the definition of engineering geology; principles involved in geological mapping; methods on how to make engineering geological maps; and rock and soil description and classifications. Also covered in the book are topics such as the different kinds of engineering geological mapping; the zoning concept in engineering geological mapping; terrain evaluation; construction sites; and land and water management. The text is recommended for engineers and geologists who would like to be familiarized with the concepts and practices involved in geological mapping.

Civil Engineer's Reference Book, Fourth Edition provides civil engineers with reports on design and construction practices in the UK and overseas. It gives a concise presentation of theory and practice in the many branches of a civil engineer's profession and it enables them to study a subject in greater depth. The book discusses some improvements in earlier practices, for example in surveying, geotechnics, water management, project management, underwater working, and the control and use of materials. Other changes covered are from the evolving needs of clients for almost all forms of construction, maintenance and repair. Another major change is the introduction of new national and Euro-codes based on limit state design, covering most aspects of structural engineering. The fourth edition incorporates these advances and, at the same time, gives greater prominence to the special problems relating to work overseas, with differing client requirements and climatic conditions. Chapters 1 to 10 provide engineers, at all levels of development, with 'lecture notes' on the basic theories of civil engineering. Chapters 11 to 44 cover the practice of design and construction in many of the fields of civil engineering. Civil engineers, architects, lawyers, mechanical engineers, insurers, clients, and students of civil engineering will find benefit in the use of this text.

Setting Out For Construction is a comprehensive practical handbook on the theory and practice of site surveying. Aimed at anyone who is studying site surveying as part of a civil engineering or construction related qualification as well as those who have been thrown in at the deep and end and need learn the principles and practices of setting out

It is easy to underestimate how little was known about crimes and victims before the findings of the National Crime Victimization Survey (NCVS) became common wisdom. In the late 1960s, knowledge of crimes and their victims came largely from reports filed by local police agencies as part of the Federal Bureau of Investigation's (FBI) Uniform Crime Reporting (UCR) system, as well as from studies of the files held by individual police departments. Criminologists understood that there existed a "dark figure" of crime consisting of events not reported to the police. However, over the course of the last decade, the effectiveness of the NCVS has been undermined by the demands of conducting an increasingly expensive survey in an effectively flat-line budgetary environment. Surveying Victims: Options for Conducting the National Crime Victimization Survey, reviews the programs of the Bureau of Justice Statistics (BJS.) Specifically, it explores alternative options for conducting the NCVS, which is the largest BJS program. This book describes various design possibilities and their implications relative to three basic goals; flexibility, in terms of both content and analysis; utility for gathering information on crimes that are not well reported to police; and small-domain estimation, including providing information on states or localities. This book finds that, as currently configured and funded, the NCVS is not achieving and cannot achieve BJS's mandated goal to "collect and analyze data that will serve as a continuous indication of the incidence and attributes of crime." Accordingly, Surveying Victims recommends that BJS be afforded the budgetary resources necessary to generate accurate measure of victimization.

A guide to the principles and practice of domestic building surveys from instruction through to writing the report, including information on the surveyor's legal liabilities. Examples of typical defects, their causes and identification are given and a specimen survey report is included.
