Women, Fire, and Dangerous Things

Lakoff's *Women, Fire, and Dangerous Things* is a treasure trove of linguistic examples and a carefully developed model of cognition argued on the basis of semantics. His experientialism places the human act of cognition in the center; his brilliantly presented result is that cognition is vitally dependent on metaphor, which he defines as a mapping of conceptual structures from one domain onto ...

"The authors restore metaphor to our lives by showing us that it's never gone away. We've merely been taught to talk as if it had: as though weather maps were more 'real' than the breath of autumn; as though, for that matter, Reason was really 'cool.' What we're saying whenever we say is a theme this book illumines for anyone attentive." – Hugh Kenner, Johns Hopkins University "In this bold and powerful book, Lakoff and Turner continue their use of metaphor to show how our minds get hold of the world. They have achieved nothing less than a postmodern Understanding Poetry, a new way of reading and teaching that makes poetry again important." – Norman Holland, University of Florida

The now-classic *Metaphors We Live By* changed our understanding of metaphor and its role in language and the mind. Metaphor, the authors explain, is a fundamental mechanism of mind, one that allows us to use what we know about our physical and social experience to provide understanding of countless other subjects. Because such metaphors structure our most basic understandings of our experience, they are "metaphors we live by"—metaphors that can shape our perceptions and actions without our

ever noticing them. In this updated edition of Lakoff and Johnson's influential book, the authors supply an afterword surveying how their theory of metaphor has developed within the cognitive sciences to become central to the contemporary understanding of how we think and how we express our thoughts in language.

In *From Molecule to Metaphor*, Jerome Feldman proposes a theory of language and thought that treats language not as an abstract symbol system but as a human biological ability that can be studied as a function of the brain, as vision and motor control are studied. This theory, he writes, is a "bridging theory" that works from extensive knowledge at two ends of a causal chain to explicate the links between. Although the cognitive sciences are revealing much about how our brains produce language and thought, we do not yet know exactly how words are understood or have any methodology for finding out. Feldman develops his theory in computer simulations—formal models that suggest ways that language and thought may be realized in the brain. Combining key findings and theories from biology, computer science, linguistics, and psychology, Feldman synthesizes a theory by exhibiting programs that demonstrate the required behavior while remaining consistent with the findings from all disciplines. After presenting the essential results on language, learning,

neural computation, the biology of neurons and neural circuits, and the mind/brain, Feldman introduces specific demonstrations and formal models of such topics as how children learn their first words, words for abstract and metaphorical concepts, understanding stories, and grammar (including "hot-button" issues surrounding the innateness of human grammar). With this accessible, comprehensive book Feldman offers readers who want to understand how our brains create thought and language a theory of language that is intuitively plausible and also consistent with existing scientific data at all levels.

What are human beings like? How is knowledge possible? What is truth? Where do moral values come from? Questions like these have stood at the center of Western philosophy for centuries. In addressing them, philosophers have made certain fundamental assumptions—that we can know our own minds by introspection, that most of our thinking about the world is literal, and that reason is disembodied and universal—that are now called into question by well-established results of cognitive science. It has been shown empirically that: Most thought is unconscious. We have no direct conscious access to the mechanisms of thought and language. Our ideas go by too quickly and at

too deep a level for us to observe them in any simple way. Abstract concepts are mostly metaphorical. Much of the subject matter of philosophy, such as the nature of time, morality, causation, the mind, and the self, relies heavily on basic metaphors derived from bodily experience. What is literal in our reasoning about such concepts is minimal and conceptually impoverished. All the richness comes from metaphor. For instance, we have two mutually incompatible metaphors for time, both of which represent it as movement through space: in one it is a flow past us and in the other a spatial dimension we move along. Mind is embodied. Thought requires a body—not in the trivial sense that you need a physical brain to think with, but in the profound sense that the very structure of our thoughts comes from the nature of the body. Nearly all of our unconscious metaphors are based on common bodily experiences. Most of the central themes of the Western philosophical tradition are called into question by these findings. The Cartesian person, with a mind wholly separate from the body, does not exist. The Kantian person, capable of moral action according to the dictates of a universal reason, does not exist. The phenomenological person, capable of knowing his or her mind entirely through introspection alone, does not exist. The utilitarian person, the Chomskian person, the poststructuralist person, the computational person, and the person defined by analytic

philosophy all do not exist. Then what does? Lakoff and Johnson show that a philosophy responsible to the science of mind offers radically new and detailed understandings of what a person is. After first describing the philosophical stance that must follow from taking cognitive science seriously, they re-examine the basic concepts of the mind, time, causation, morality, and the self: then they rethink a host of philosophical traditions, from the classical Greeks through Kantian morality through modern analytic philosophy. They reveal the metaphorical structure underlying each mode of thought and show how the metaphysics of each theory flows from its metaphors. Finally, they take on two major issues of twentieth-century philosophy: how we conceive rationality, and how we conceive language.

This work is the culmination of an eighteen-year collaboration between Ken Hale and Samuel Jay Keyser on the study of the syntax of lexical items. It examines the hypothesis that the behavior of lexical items may be explained in terms of a very small number of very simple principles. In particular, a lexical item is assumed to project a syntactic configuration defined over just two relations, complement and specifier, where these configurations are constrained to preclude iteration and to permit only binary branching. The work examines this hypothesis by methodically looking at a variety of

All new and original to this volume, the 21 stories in *Dangerous Women* include work by twelve New York Times bestsellers, and seven stories set in the authors' bestselling continuities—including a new "Outlander" story by Diana Gabaldon, a tale of Harry Dresden's world by Jim Butcher, a story from Lev Grossman set in the world of *The Magicians*, and a 35,000-word novella by George R. R. Martin about the Dance of the Dragons, the vast civil war that tore Westeros apart nearly two centuries before the events of *A Game of Thrones*. Also included are original stories of dangerous women—heroines and villains alike—by Brandon Sanderson, Joe Abercrombie, Sherrilyn Kenyon, Lawrence Block, Carrie Vaughn, S. M. Stirling, Sharon Kay Penman, and many others. Writes Gardner Dozois in his Introduction, "Here you'll find no hapless victims who stand by whimpering in dread while the male hero fights the monster or clashes swords with the villain, and if you want to tie these women to the railroad tracks, you'll find you have a real fight on your hands. Instead, you will find sword-wielding women warriors, intrepid women fighter pilots and far-ranging spacewomen, deadly female serial killers, formidable female superheroes, sly and seductive femmes fatale, female wizards, hard-living Bad Girls, female bandits and rebels, embattled survivors in Post-
